Seiler Precision Manufacturing Achieves AS9100D Certification, Demonstrating Commitment to Aerospace Industry

ST. LOUIS (April 18, 2023) – Seiler Precision Manufacturing, a leading full-service contract manufacturer, proudly announces that it has achieved AS9100D certification, an internationally recognized standard for quality assurance and risk management for the aerospace industry. AS9100D is recognized by the U.S. Government and Department of Defense as a standard to qualify a company as a reliable supplier. This milestone demonstrates the company's steadfast dedication to providing high-quality products and services to its customers in the aerospace and defense industries.

“Seiler Precision Manufacturing has a long history of being committed to excellence in everything we do. Achieving AS9100D certification is a testament to our commitment to meet and exceed the stringent quality requirements of the aerospace industry,” said Rick Seiler, President and CEO of Seiler Instrument. “Our culture is all about continuous improvement of our internal processes and ultimately satisfying the customer. This certification reaffirms our position as a trusted partner in the aerospace and defense industries.”

The AS9100D certification is based on the ISO 9001:2015 quality management system standard and provides additional requirements specific to the aerospace industry. The certification process involved a rigorous audit conducted by a nationally accredited certification body.

Matt Seiler, Vice President of Seiler Precision Manufacturing, emphasized the division-wide effort required to achieve this certification: “This AS9100D certification process involved everyone on our team and gives our customers and business partners strong confidence in our quality management system. We already supply aerospace parts and components on many different vehicle and weapons platforms and this certification allows us to work directly as a supplier to our large aerospace customers. The accreditation mark really is a symbol of the trust and reliability that our customers can count on.”

Seiler Instrument is a fourth-generation, family-owned business established in 1945. With this certification, Seiler will continue its commitment to the local community. Rick Seiler noted, “I am proud of our team coming together. We are now better equipped to serve our aerospace customers and anticipate their needs, ensuring they receive the highest quality products and services for years to come.”
